

IMPORTANT NOTICE ABOUT YOUR PRINTER

Your large format printer should always remain plugged in and turned on.

Keeping your printer plugged in and powered on is critical for the health and optimization of your printer.

The printer will go into sleep mode but still allow installation of updates and periodic initializers needed. It will also periodically run a cleaning procedure to help keep the print heads clear.

It is important to print once or twice a week to prevent damage to your printheads

Print this page to preserve your printheads during long periods without use.

This will help prevent clogged printheads and print quality issues when during low usage times.

Eastern Engineering is not responsible for any damage caused from printers that have been left unplugged or not properly maintained during low usage periods.

For other questions or concerns regarding how to best maintain your large format printer please contact Eastern Engineering at (800) 884-4115.
